Subject: RE: [I] Chlormequat chloride domestic tolerances coding

Hi, Jessica.

As I said in the voicemail I just left on your office line, the action that you submitted for the first domestic food use will be coded as an R150. We will accept an additional action to change the import tolerances as an R292*3 (meaning the fee would be 3 times the R292 fee).

In order to streamline the process of having two petitions for the same chemical in house as once, I have begun discussions with our Health Effects Division. They have some questions-

1. Are the Canadian and US use patterns identical?
 2. Is there US-only data coming in with the domestic use package that would not have factored into PMRA's tolerance calculations?
 3. Could you liaise with PMRA to get us the Canadian DERs for any studies submitted to both EPA and PMRA?
 4. Are tolerances for all commodities being revised? Including the animal tolerances (milk, meat, etc)?
 5. Are the revised import tolerances going to be higher than those currently set in the US? If so is it much higher?
 6. Based on Canadian growing seasons for these crops, by what date would you need the tolerances to be revised?
- We are trying to determine if there is some way for us to "meet in the middle" between the two PIRA dates.

Thanks for any insight you can provide.

I will be out of the office from the end of today until January 2nd. Hope you have a wonderful holiday season!

Thanks,
Lindsay

Thank you for the information, Lindsay. I do not plan to work on the new petition until the first of the year. I will wait for feedback from you before I do too much work on this. I will follow back with you mid-January.

Thanks,
Jessica

Hi, Jessica.

Thanks for the additional information. I'm hoping to be able to present this to the PRIA committee on 12/20, but that assumes that we will have enough managers in the office to hold a meeting. It seems likely that we will not get a determination on this until early in the new year. I hope I can get back to you with a clear answer before you put any time into developing a petition that may or may not be acceptable.

I'm glad to hear the [Ex. 6 Personal Privacy (PP)] has been such a great addition to the family. And I'm glad you're back to work on this chlormequat chloride business with us!

-Lindsay

Hi Lindsay,

We did submit a Section 3 petition for chlormequat chloride under PRIA code R150 – First Food Use – on 12/7/2018. As part of the petition we submitted additional residue studies for wheat, barley, and oats. I know we will not have feedback on this until late 2020, so our plan is to also submit an amendment to our existing tolerance under PRIA code R292 to try to get the tolerances adjusted for the 2019 growing season. I plan to focus on this submission at the start of the new year. Please let me know your thoughts.

Thank you for the well wishes. I had a [Ex. 6 Personal Privacy (PP)] in June. She is our [Ex. 6 Personal Privacy (PP)] and is such a good baby. I've been back to work a few weeks now... the transition always takes me a little time, but I'm so glad our chlormequat chloride submission is out the door.

Thanks,
Jessica

Hi, Jessica.

I've been discussing the chlormequat chloride with Jane Eichoff recently and she let me know that you submitted a package last week. I'll look forward to receiving that.

I'll be presenting to the PRIA managers meeting in a couple of weeks to see whether submitting an R292 in addition to the petition for domestic tolerances could be done. I am also planning to check to make sure that the committee agrees with my thoughts on coding the action to add domestic tolerances. Could you let me know what code was included in the application for the new uses submitted last week?

Also, Jane told me that you had recently been on maternity leave. Congratulations! Wishing all the best for you and yours!
